Satellite Communication Systems - Part 1, Theory, Technology & Applications (Pt. 1)

Marcin Swiston

Satellite Communication Systems - Part 1, Theory, Technology & Applications (Pt. 1) Marcin Swiston
This research covers the emerging technology of Satellite and GPS Communications. It gives a view of how this technology is adding a new dimension to daily activities. Its applications range from a country's defense system to locating a local store in any area. The Global Positioning System, usually called GPS, is the only fully-functional satellite navigation system. A constellation of more than two dozen GPS satellites broadcasts precise timing signals by radio, allowing any GPS receiver (abbreviated to GPSr) to accurately determine its location (longitude, latitude, and altitude) in any weather, day or night, anywhere on Earth. GPS has become a vital global utility, indispensable for modern navigation on land, sea, and air around the world, as well as an important tool for map-making and land surveying. GPS also provides an extremely precise time reference, required for telecommunications and some scientific research, including the study of earthquakes. GPS receivers can also gauge altitude and speed with a very high degree of accuracy. Prof. Dr. Marcin Swiston, Ph.D., MBA works as Chief Engineer for one of the world's biggest satellite communication companies. Due to the size of the company and location of its all on-shore and off-shore remote offices he has the opportunity to work with the best and most knowledgeable people in the satellite industry and to lead multinational and multicultural team of experts. He graduated from various universities in Poland, USA and England. He is Ph.D. in Physics, MBA in Technical Project Management and MSc. in IT and Systems Engineering. He is also a DBAM, Cisco, Apple and Sun Microsystems Certified Expert. In July 2006 he was appointed as the Honorary Doctor of Philosophy and the Honorary Professor of the Regent University (USA) in recognition of his achievements and contribution in the fields of Satellite Communication and Networking. He is currently enrolled in Business Administration doctorate program at Chelsea University in London.

From reader reviews:

Teddy Hathorn:

Hey guys, do you really want to find a new book to see? Maybe the book with the title Satellite Communication Systems - Part 1, Theory, Technology & Applications (Pt. 1) suitable to you? The book was written by renowned writer in this era. The book entitled Satellite Communication Systems - Part 1, Theory, Technology & Applications (Pt. 1) is the main one of several books that everyone reads now. This specific book has inspired lots of people in the world. When you read this book you will enter the new dimension that you ever knew just before. The author explained their idea in the simple way, so all of people can easily understand the core of this e-book. This book will give you a lot of information about this world now. In order to see the representation of the world in this book.

Rebecca Wheeler:

Do you have something that suits you such as a book? Book lovers usually prefer to opt for books like comic, short story and the biggest some may be novel. Now, why not seeking Satellite Communication Systems - Part 1, Theory, Technology & Applications (Pt. 1) that give your fun preference will be satisfied by simply reading this book. Reading habit all over the world can be said as the opportunity for people to know the world a great deal better than how they react in the direction of the world. It can't be said constantly that reading behavior only for the geeky man but for all of you who want to be a success person. So, for every you who want to start studying as your good habit, it is possible to pick Satellite Communication Systems - Part 1, Theory, Technology & Applications (Pt. 1) become your personal starter.

Roger Lee:

You are able to spend your free time to read this book this reserve. This Satellite Communication Systems - Part 1, Theory, Technology & Applications (Pt. 1) is simple to deliver you can read it in the park, in the beach, train and also soon. If you did not have much space to bring the particular printed book, you can buy the particular e-book. It is make you better to read it. You can save typically the book in your smart phone. And so there are a lot of benefits that you will get when one buys this book.

Mary Patterson:

Reserve is one of source of information. We can add our understanding from it. Not only for students but in addition native or citizen need book to know the up-date information of year in order to year. As we know those publications have many advantages. Beside most of us add our knowledge, can also bring us to around the world. By the book Satellite Communication Systems - Part 1, Theory, Technology & Applications (Pt. 1) we can consider more advantage. Don't someone to be creative people? To become creative person must want to read a book. Just choose the best book that suitable with your aim. Don't become doubt to change your life with that book Satellite Communication Systems - Part 1, Theory, Technology & Applications (Pt. 1). You can more desirable than now.
