Update on 09/13/2015: This book has helped thousands of Java developers learn Spring fast and effectively. It is revised and upgraded recently to make it even easier to set up the entire SOBA sample stack with Java 8 + Maven + Eclipse + DB (MySQL or PostgreSQL or SQL Server or Oracle) + Tomcat 8 (or any other servlet engine) on Windows or Mac OS X or Linux. All components are up-to-date, e.g., with latest Spring framework 4.2.0 + Spring-security 4.0.2 + Hibernate 5.0.1.Final, and many more. In addition, the author is committed to providing fast support via email.

Some readers prefer "learning by reading," and some prefer "learning by coding." This book is written based on the author's belief that "reading is learning, but learning by coding is better learning." While taking a code-intensive approach, this book provides adequate textual descriptions to help readers grasp every Spring feature presented in the book. It is a strong plus that it is not as verbose or as wordy as other Spring books so that a reader can finish it within a reasonable timeframe. After spending 2-3 weeks completing your self-paced training with this book, you will be able to start contributing to your Spring-based enterprise application project immediately. It will also be considerably easier for you to read the lengthy Spring reference documentations and other verbose Spring books.
