Artificial Human Sensors: Science and Applications

As the elderly population increases, the importance of creating sophisticated information support to humans with limited sensing performance has also grown. This book discusses human and artificial sensing in conjunction with human perception capabilities (auditory, taste, smell, vision, and touch). It also discusses the fusion of this sensing information to find answers to questions such as how we can increase our human "fuzzy" decision capability (perception). The book presents intelligent new technologies that can enhance the natural sensing, perception, and mobility abilities of humans, allowing them to have healthier, more productive, safer lives.
