**The Long Thaw: How Humans Are Changing the Next 100,000 Years of Earth's Climate (Princeton Science Library)** David Archer

The human impact on Earth's climate is often treated as a hundred-year issue lasting as far into the future as 2100, the year in which most climate projections cease. In *The Long Thaw*, David Archer, one of the world's leading climatologists, reveals the hard truth that these changes in climate will be "locked in," essentially forever.

If you think that global warming means slightly hotter weather and a modest rise in sea levels that will persist only so long as fossil fuels hold out (or until we decide to stop burning them), think again. In *The Long Thaw*, David Archer predicts that if we continue to emit carbon dioxide we may eventually cancel the next ice age and raise the oceans by 50 meters. A human-driven, planet-wide thaw has already begun, and will continue to impact Earth's climate and sea level for hundreds of thousands of years. The great ice sheets in Antarctica and Greenland may take more than a century to melt, and the overall change in sea level will be one hundred times what is forecast for 2100. By comparing the global warming projection for the next century to natural climate changes of the distant past, and then looking into the future far beyond the usual scientific and political horizon of the year 2100, Archer reveals the hard truths of the long-term climate forecast.

Archer shows how just a few centuries of fossil-fuel use will cause not only a climate storm that will last a few hundred years, but dramatic climate changes that will last thousands. Carbon dioxide emitted today will be a problem for millennia. For the first time, humans have become major players in shaping the long-term climate. In fact, a planetwide thaw driven by humans has already begun. But despite the seriousness of the situation, Archer argues that it is still not too late to avert dangerous climate change--if humans can find a way to cooperate as never before.

Revealing why carbon dioxide may be an even worse gamble in the long run than in the short, this compelling and critically important book brings the best long-term climate science to a general audience for the first time.

With a new preface that discusses recent advances in climate science, and the impact on global warming and climate change, *The Long Thaw* shows that it is still not too late to avert dangerous climate change--if we can find a way to cooperate as never before.

### **From reader reviews:**

#### **Lourdes Tyner:**

Inside other case, little folks like to read book The Long Thaw: How Humans Are Changing the Next 100,000 Years of Earth's Climate (Princeton Science Library). You can choose the best book if you like reading a book. As long as we know about how is important a book The Long Thaw: How Humans Are Changing the Next 100,000 Years of Earth's Climate (Princeton Science Library). You can add understanding and of course you can around the world by way of a book. Absolutely right, mainly because from book you can understand everything! From your country right up until foreign or abroad you can be known. About simple matter until wonderful thing it is possible to know that. In this era, you can open a book or maybe searching by internet unit. It is called e-book. You can utilize it when you feel bored stiff to go to the library. Let's go through.

#### **Michael Medellin:**

What do you regarding book? It is not important along with you? Or just adding material when you require something to explain what your own problem? How about your free time? Or are you busy particular person? If you don't have spare time to accomplish others business, it is gives you the sense of being bored faster. And you have extra time? What did you do? Every person has many questions above. They must answer that question because just their can do that will. It said that about reserve. Book is familiar in each person. Yes, it is suitable. Because start from on guardería until university need that The Long Thaw: How Humans Are Changing the Next 100,000 Years of Earth's Climate (Princeton Science Library) to read.

#### **Doug Martin:**

Reading can called head hangout, why? Because if you are reading a book mainly book entitled The Long Thaw: How Humans Are Changing the Next 100,000 Years of Earth's Climate (Princeton Science Library) your mind will drift away trough every dimension, wandering in every aspect that maybe unfamiliar for but surely will end up your mind friends. Imaging every single word written in a guide then become one web form conclusion and explanation this maybe you never get just before. The The Long Thaw: How Humans Are Changing the Next 100,000 Years of Earth's Climate (Princeton Science Library) giving you a different experience more than blown away the mind but also giving you useful facts for your better life in this era. So now let us demonstrate the relaxing pattern this is your body and mind is going to be pleased when you are finished examining it, like winning a sport. Do you want to try this extraordinary wasting spare time activity?

#### **William Lebel:**

You could spend your free time to study this book this e-book. This The Long Thaw: How Humans Are Changing the Next 100,000 Years of Earth's Climate (Princeton Science Library) is simple to create you can read it in the area, in the beach, train in addition to soon. If you did not get much space to bring the actual printed book, you can buy typically the e-book. It is make you much easier to read it. You can save the actual

book in your smart phone. Consequently there are a lot of benefits that you will get when you buy this book.
