This extensively updated new edition of the acclaimed book in the Advances in Psychotherapy series integrates empirical research from the last 10 years to provide clear and up-to-date guidance on the assessment and effective treatment of bipolar disorder. The expert authors, a team of psychotherapists, medical practitioners, and researchers, begin by describing the main features of bipolar disorder based on DSM-5 and ICD-10 criteria. Current theories and medication management guidelines are described, along with decision trees for evaluating the best treatment options. They then outline a systematic, integrated, and empirically supported treatment approach involving structured, directive therapy. Special considerations, including managing suicide risk, substance misuse, and medication nonadherence, are also addressed. This compact, stand-alone resource aims to help psychotherapists, psychologists, medical and psychiatric practitioners, and nurses deliver the highest standards of care for people with bipolar disorder.
