Offshore Technology in Civil Engineering, Volume Seven: Hall of Fame Papers from the Early Years

J.S. Templeton, Alan G. Young, Joseph Kallaby

This series presents classic papers from the early years of the Offshore Technology Conference (OTC), the world's leading event for the development of offshore resources in the fields of exploration, drilling, production, and environmental protection. Since the OTC began in 1969, some of the civil engineering papers presented there have provided innovation in, vision for, and lasting impact on the design, construction, or installation of offshore infrastructure. Many papers were been adopted by design standards worldwide or have become an integral part of design software. Others have had influence far beyond the offshore industry, and some have become integral to the design process of onshore structures such as buildings and bridges. Volume 7 contains six papers inducted into the OTC Hall of Fame in 2012. The engineering methods published in these papers have proven their value through widespread use and permeate codes, standards, guidelines, and engineering software.

William Marsh:

As a pupil exactly feel bored to be able to reading. If their teacher requested them to go to the library or even make summary for some guide, they are complained. Just very little students that has reading's spirit or real their interest. They just do what the instructor want, like asked to the library. They go to generally there but nothing reading critically. Any students feel that studying is not important, boring as well as can't see colorful photos on there. Yeah, it is to be complicated. Book is very important to suit your needs. As we know that on this era, many ways to get whatever we would like. Likewise word says, many ways to reach Chinese's country.
